

AN: PAT 1999-122116
TI: Data card receiving device e.g. for card reader in motor vehicle has rocker-like part for closing card insertion slit, and transports card to read-write position using rollers and drive motor
PN: DE19732583-A1
PD: 04.02.1999
AB: The data-card receiving device has a front wall with a card slit and slit closing part (4). The closing part is formed as a rocker which is elastically supported in the data card insertion plane. Transport rollers (8) with pressure members (31) carry the card (6) between the insertion and withdrawal position and a read and write position. The transport rollers are driven by a motor, which also drives the closing part.; USE - For use in vehicle for storage of journey data. ADVANTAGE - Has very low height, and can be accommodated in tachograph in vehicle.
